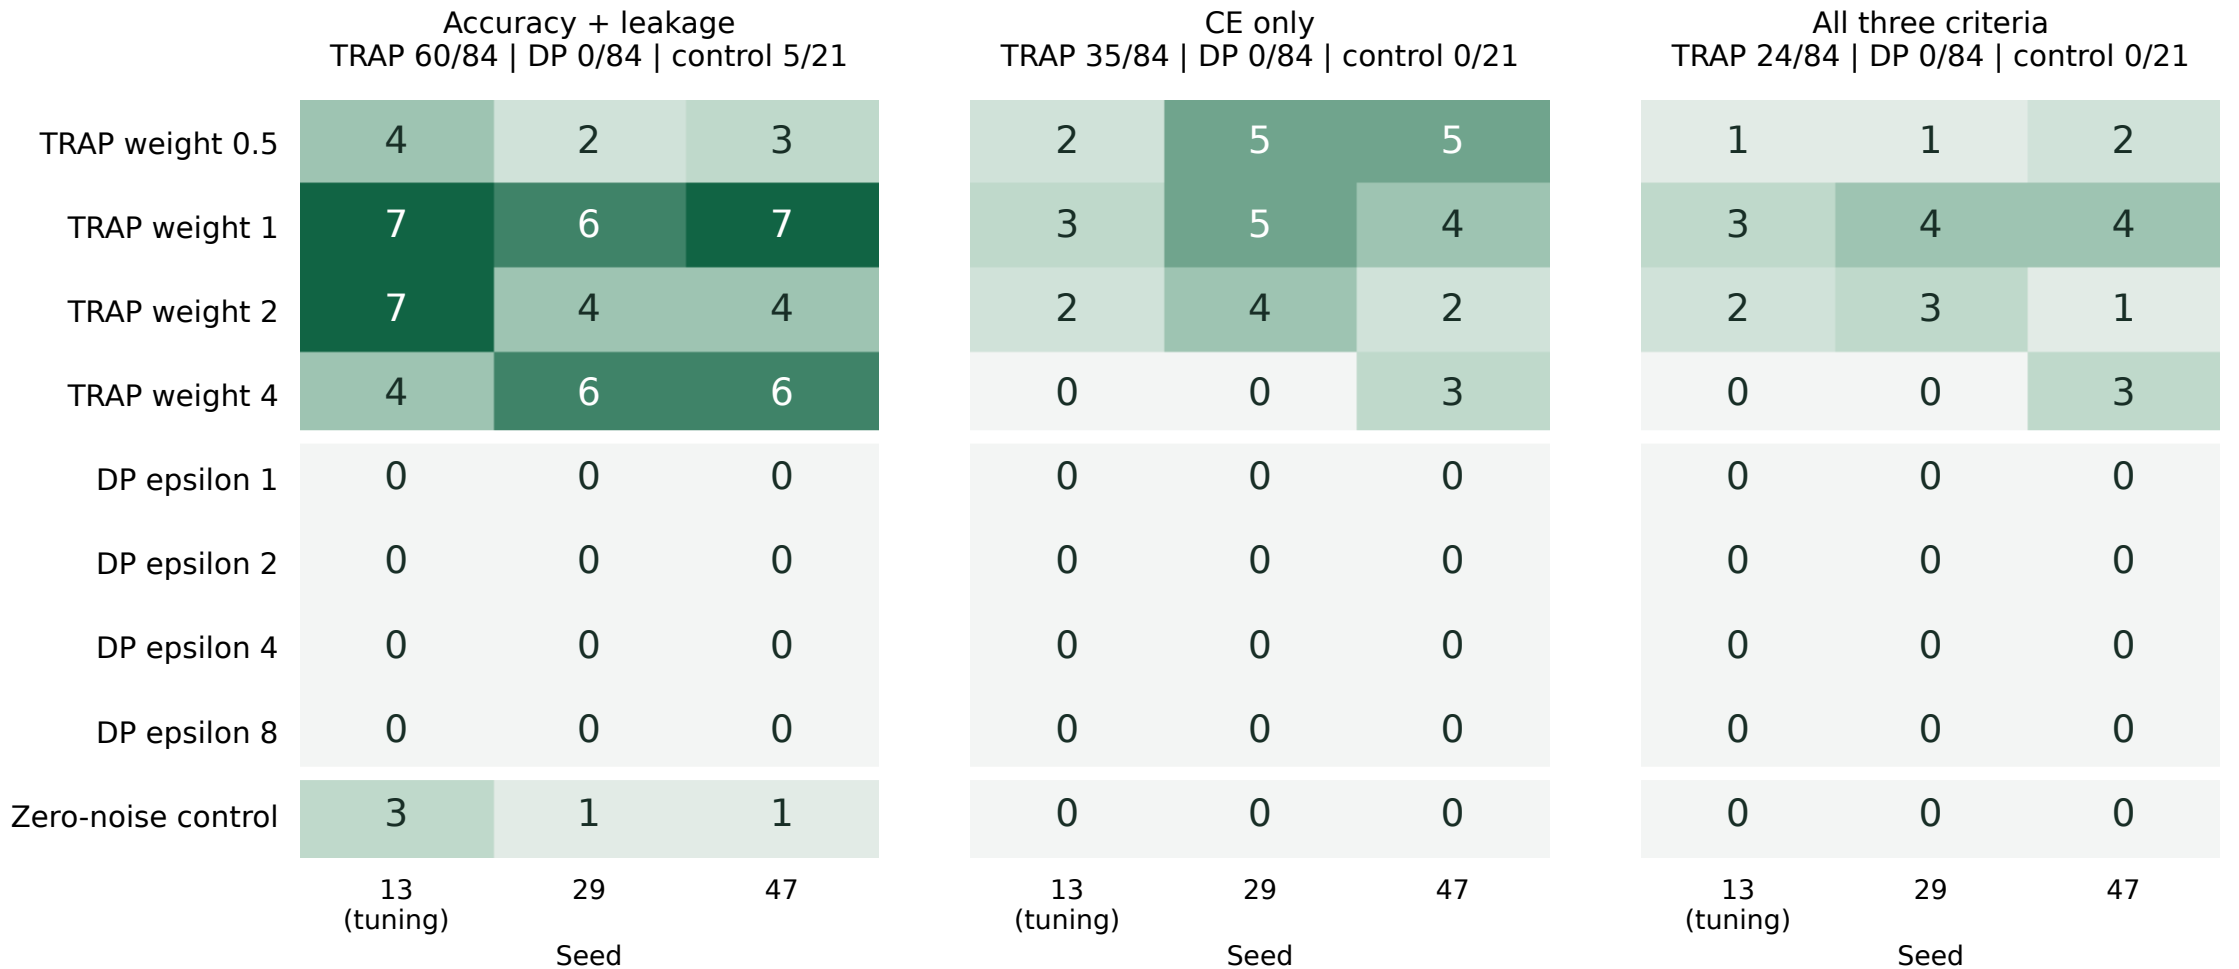
Final paired screens: all strengths and seeds

Cells count passing K values out of 7. All 189 nonbaseline comparisons are retained.



Accuracy + leakage: accuracy loss <= 1 percentage point AND strongest identifier nAUC reduction >= 0.05.

CE only: defended / baseline CE <= 1.01. All three: both screens. Paired by K and seed; tolerance 1e-12.

Empirical screens are not DP guarantees. Zero-noise controls have no DP guarantee. Source: accepted Nov 5, 2026 delivery.
